

# e-mobilität

E-Mobility as the Key to Mobility of the Future

Partners

With funding from

**Digital  
Competence  
Database****Analysis of  
Governance  
Structures**

One of the first components of our project is the creation of a digital EV competence database for the Metropolitan Region of Northwest Germany. The databank will act as a platform for regional companies, start-ups and small businesses as well as research institutes, qualification programs, municipal initiatives, and pilot projects related to battery and F-cell electric vehicle technologies. In a second step, project partners will analyze regional governance structures that affect or regulate the implementation of electric vehicles and the development of charging infrastructure.

**Special-use  
and Utility  
Vehicles**

In this focus topic the work group will explore the possibility of developing and using electrically powered special-use and utility vehicles. The main goal is to advance development of electric special-use and utility vehicles in the Northwest of Germany as well as their use in municipalities and public works sectors. Within the scope of the two-year project, the work group aims to advise municipal authorities and public-private-partnerships in order to support their transition away from fossil-fueled vehicles.

**Shipping  
and Logistics  
Centers**

This subproject aims to put theory into practice in a work group consisting of experts from regional logistics companies, the energy sector, and technical universities. The project workshops aim to create a competition-free, constructive environmentally friendly, open dialogue about the participants' experiences, reservations, and success stories with the implementation of electric vehicles in shipping and logistics.

**E-Mobility  
and Tourism**

Project partners in this work group aim to support regional tourist destinations and tourism-related organizations that incorporate e-mobility into their services and / or concepts. For example, services for the maintenance and repair of EV or nationally standardized payment systems offer room for improvement and could contribute towards more environmentally friendly tourism.
